Contents

Chapter 1: The Developing Biology

Background Summary 10

Practical Work

1.1 Using the 'Scientific Method' 10

1.2 An exercise in observation 11

1.3 Testing a hypothesis 11

Questions and Problems 12

Chapter 2: Structure and Function in Cells

Background Summary 14

Practical Work

2.1 Staining and drawing

2.2 Fine structure of cells 16

2.3 Diversity of cells 18

2.4 Effect of temperature on the movement of pigment through cell membranes 19

Questions and Problems 20

Chapter 3: Tissues, Organs and Organisation

Background Summary 22

Practical Work

3.1 Examination of some basic animal tissues 22

3.2 Examination of some basic plant tissues 25

3.3 Microscopic structure of organs and tissues 27

3.4 Some other unicellular organisms 28

3.5 Tissue level of organisation: *Hydra* 30

Questions and Problems 31

Chapter 4: Movement in and out of Cells

Background Summary 33

Practical Work

4.1 Cells and osmosis 33

4.2 Osmotic relations of red blood cells 34

4.3 Water potential of potato tuber cells: the weighing method 35

4.4 Water potential of potato tuber cells: the density method 36

4.5 Osmotic potential of cell sap of plant epidermal cells 37

4.6 Differential ion movement into red cabbage epidermal cells 38

Questions and Problems 39

Chapter 5: The Chemicals of Life

Background Summary 41

Practical Work

5.1 Identification of biologically important compounds 42

5.2 Analysis of amino acids in a protein by paper chromatography 44

5.3 Analysis of amino acids in a protein by paper electrophoresis 45

5.4 Vitamin C content of a lemon 47

Questions and Problems 47

Chapter 6: Chemical Reactions in Cells

Background Summary 50

Practical Work

6.1 Action of the enzyme catalase 50

6.2 Following the progress of an enzyme-controlled reaction 51

6.3 Effect of temperature on the action of an enzyme 52

6.4 Influence of pH on the activity of potato catalase 53

6.5 Specificity of enzymes: sugars metabolised by yeast 54

6.6 Effect of enzyme and substrate concentrations on the hydrolysis of sucrose 55

6.7 Synthesis of starch using an enzyme extracted from potato 56

Questions and Problems 57

Chapter 7: The Release of Energy

Background Summary 59

Practical Work

7.1 Composition of inspired and expired air 60

7.2 Oxygen consumption in humans 62

7.3 Effect of temperature on the oxygen consumption of broad bean seeds 64

7.4 Multiplication of yeast cells in aerobic and anaerobic conditions 65

7.5 Effect of temperature on the rate of anaerobic respiration in yeast 66

Questions and Problems 67

Chapter 8: Gas Exchange in Animals

Background Summary 69

Practical Work

8.1 Dissection of the respiratory apparatus of the rat 69

8.2 Ventilation of the lung in humans 71

8.3 Microscopic structure of the mammalian respiratory apparatus 72

8.4 Structure of the gills of the dogfish 73

8.5 Tracheal system of insects 75

Questions and Problems 76

Chapter 9: Heterotrophic Nutrition

Background Summary 78

Practical Work

9.1 Dissection of the mammalian alimentary canal 78

9.2 Microscopic structure of the gut wall 81

9.3 Digestion of starch in humans 84

9.4 Digestion of egg white 85

9.5 Digestion of fat 85

9.6 Structure and origin of human teeth 86

9.7 Teeth and skulls of different mammals 87

9.8 Mouthparts of insects 89

Questions and Problems 91

Chapter 10: Autotrophic Nutrition

Background Summary 93

Practical Work

10.1 Effect of light intensity on the rate of photosynthesis 94

10.2 Effect of hydrogen carbonate concentration on the rate of photosynthesis 96

10.3 Separation of photosynthetic pigments by paper chromatography 97

10.4 Structure of leaves 98

10.5 Compensation point of a plant 100

Questions and Problems 101

Chapter 33: Associations between Organisms

Background Summary 331

Practical Work

33.1 Examination of the liver fluke (*Fasciola hepatica*) 331

33.2 Examination of three parasitic fungi 334

33.3 Observations of various interspecific associations 335

Questions and Problems 337

Chapter 34: Evolution in Evidence

Background Summary 339

Practical Work

34.1 The vertebrate pentadactyl limb: an exercise in homology 339

34.2 Examination of the chevron characters 342

Questions and Problems 344

Chapter 35: The Mechanism of Evolution

Background Summary 347

Practical Work

35.1 Variation in a population of animals or plants 348

35.2 Competition and community variation in blackberry 349

35.3 Comparison of the growth of grasses in relation to nutrient stress 350

35.4 A model of selection 352

Questions and Problems 353

Chapter 36: Some Major Steps in Evolution

Background Summary 360

Practical Work

36.1 The most primitive living organism? 360

36.2 Evolution of the multicellular state 361

36.3 Dissection of the earthworm 362

36.4 Dissection of the cockroach 364

Questions and Problems 366

Chapter 37: Classification and Diversity of Organisms

Background Summary 366

Practical Work

37.1 Construction of an identification key 366

37.2 Taxonomic hierarchy 368

37.3 Who's who in the five Kingdoms 369

Questions and Problems 370

Appendices

1 Additional questions and problems 373

2 Advice to the student 376

3 Equipment and operations 381

4 Ecological techniques for measuring the environment 386

5 Projects 389

6 Statistical tests 393

7 Advice for technicians 400

8 Sources of further information 404
